

On Formation

Abstract

The contents of this paper contradict:

- ***Accidental explosion and expansion from Nothingness [Georges Lemaître, Edwin Hubble "Big Bang Theory"]***
 - Chance cannot operate under the sole condition of Nothingness (events cannot occur), and to postulate 'Absolute Nothingness', the maintenance of the Nothingness State must also be postulated. Therefore, *Absolute Nothingness that is not maintained is Non-reality.*
- ***The existence of objects (particles) being the premise of force [Isaac Newton "Classical Mechanics and Particle Physics"]***
 - Maintenance also belongs to Shift ($\rightarrow$) [Pressure (P)]. Space is formed by the accumulation of Shift, and objects (particles) belong to Space. Therefore, *Force precedes Space, and Space precedes objects (particles).*
- ***Eternal linear motion in space without external forces [Galileo Galilei, Isaac Newton "First Law of Motion"]***
 - — Since maintenance also belongs to Shift — everything (everywhere) is always shifting (Force acts). Therefore, Absolute Empty-space without external forces is Non-reality. Furthermore, all Motion is guided to (perpetuates in) the path of lowest Resistance (R). ($\text{Motion} \propto -\nabla R$)
- ***Intrinsic invariant properties of matter defined by the relation between acceleration and force ($F=ma$) [Isaac Newton "Principia"]***
 - 'Getting hit by a heavier object hurts more.', 'Moving on a scale changes the weight value'... Mass is not an intrinsic property. Force (F) is Pressure (P), and Pressure (P) is $\text{Volume (V)} * \text{Density (} \rho \text{)}$. *When a certain amount of Pressure is added to matter [Object, Volume (V) * Density (} \rho \text{)], the direction which that Object [Volume, (V) * Density (} \rho \text{)] heads toward is guided to (perpetuates in) the path of lowest Resistance, and the Pressure [Mass, Volume (V) * Density (} \rho \text{)] corresponding to the Object is also a variable retention state that constantly changes according to external Pressure and Density. [$v \equiv \text{Impulse (I)} \propto |-\nabla R| \Leftrightarrow |-\nabla \rho|$]*
- ***Immediate and absolute symmetry of action and reaction [Isaac Newton "Third Law of Motion"]***
 - As long as an Object possesses Volume, its Inward Surface Area is structurally and naturally larger than its Outward Area. Furthermore, since even maintenance requires a Minimum Delta, Action and Reaction cannot be immediate (absolutely simultaneous).

Therefore, Action and Reaction cannot form an Absolute Symmetry in magnitude nor can they occur absolutely simultaneously.

- ***The antecedence of data that is simultaneous with phenomena and capable of predicting the future [Pierre-Simon Laplace "Laplace's Demon / Classical Determinism"]***
 - Regarding a state where θ is repeatedly added: if one recognizes $\theta+\theta+\theta+\theta$ and derives the value $\theta+\theta+\theta+\theta=0$, the state at that instant is closer to $\theta+\theta+\theta+\theta+\theta$ than to $\theta+\theta+\theta+\theta=0$. Even if the future were determined, that future cannot be absolutely identical to any past that preceded it, and thus the future cannot be predicted under 'absolutely identical conditions'. Therefore, *Information or Data cannot be absolutely simultaneous with Actuality; although one may attempt to predict the future, an image that absolutely matches the future cannot be derived.*
- ***Already completed geometric field in which events occur [Albert Einstein "General Relativity"]***
 - *"The universe is a dynamic construction site where the medium pushes, flows, and squeezes, without a fixed holder." (by Gemini)*
- ***Absolute constant (c) unchanging anywhere in the universe [Albert Einstein "Special Relativity"]***
 - Light also changes its Velocity (v) relative to gravitational fields or the atmosphere. This should not be interpreted as time slowing down or speeding up, but rather that the Velocity of Light (c) is not an Absolute Constant. ($c \equiv v \propto |\nabla R| \Leftrightarrow |\nabla \rho|$)
 - Furthermore, it contradicts various traditional views—including the above—and describes that *"The Universe is the perpetual feedback between the Non-fixed State and the Quasi-fixed State, a Fractal Perpetuity."*

On Formation

Part 1

Introduction

- Regarding this paper "On Formation", the development of its thought began in my early-to-mid 30s (originally starting under the title "On the Form of Formation"). The impetus to begin documentation arose on January 6, 2026, during a dialogue with the *AI assistant Gemini (hereinafter Gem)*, starting from a question asking how many bits $\emptyset$ and $\emptyset+\emptyset+\emptyset=\emptyset$ respectively represent, and the conversation that followed.

"The universe is a dynamic construction site where the medium pushes, flows, and squeezes, without a fixed holder." (by Gem)

- Regarding Aristotle [Metaphysics, Book Alpha, 980a 21] "Πάντες ἄνθρωποι τοῦ εἰδέναι ὀρεγόνται φύσει.", "All men by nature desire to know.", "All humans by nature possess a desire to know": First, knowing is Experience (thinking is also Experience, and Experience is also Shift) and it is the past (accumulated). Wanting to know is regarding the future. Thus, the Experience of Reality is inevitable. For example, even if a Human does not wish to experience tomorrow, as long as one is alive, one cannot help but experience tomorrow (one cannot help but know tomorrow). Therefore, even if one does not wish to know (or experience), knowing as a Human is inevitable.
- At present, an intellectual infrastructure has been formed (accumulated) that is daunting for an individual or a single Human to fully acquire, and these must be organized for the present and the future. Thus, in this paper, starting from a single proposition—"The Universe is Non-fixed (No-holder)"—I proceed to describe the Universe.

Part 2

Dialectics — Arguments and Counterarguments

1. Regarding accidental explosion and expansion from Nothingness [Georges Lemaître, Edwin Hubble "Big Bang Theory"]

- For chance to operate, there must be Impact (events, chance, etc., must be able to occur). Therefore, claiming that chance operated from a single element called Nothingness (under conditions where chance cannot occur, thus denying chance while simultaneously invoking it) is a contradiction, and *Absolute Nothingness by a single element of Nothingness is Non-reality*.
- ① If 'Nothingness' is postulated, the '*Maintenance of Nothingness*' must also be postulated. ② Maintenance ($t_0 \rightarrow t_1$) is also Shift ($\rightarrow$), and there exists a Delta ($t_0 \rightarrow t_1$). *Absolute Nothingness*, lacking even this Delta ($t_0 \rightarrow t_1$) (Maintenance, Maintenance Delta), signifies dissolution due to the absence of Maintenance and is thus *Non-reality* (Absolute Nothingness cannot be maintained, so it is self-contradictory in itself). ③ 'Nothingness' is naturally accompanied by 'Maintenance' and 'Maintenance Delta'. ④ Shift ($\rightarrow$) $\equiv$ Force (F) $\equiv$ Pressure (P) $\equiv$ Delta (δ) $\equiv$ [Volume (V) * Density (ρ)], and even when the Nothingness State is maintained, its Delta (Force, Pressure) is not 0. As the Nothingness State continues to be maintained, Pressure [Volume * Density] increases. ⑤ Furthermore, since there is a limit to Density [*Limit of Density 1*], complete overlapping is Impossible. ⑥ The Universe is a Phenomenon wherein continued Shift from the Nothingness State has accumulated.
- Concepts such as Nothingness or 0 are concepts constructed by Humans. For instance, even among Humans, complete (Absolute) synchronization of sight cannot be achieved. Thus—since even among Humans the perceived image regarding a certain Phenomenon is not absolutely identical—there naturally exists no Phenomenon that is absolutely identical to a concept constructed by Humans. Furthermore, regarding concepts like Absolute Nothingness, if derived from Empty-space, as will be discussed later, Absolutely Empty-space does not exist (Non-reality), hence it contains an error. Thus, the primordial (?) state also cannot be absolutely identical to concepts such as Absolute Nothingness.

[*Limit of Density 1*]: Since real Pressure is finite, the Density achievable by it naturally corresponds to it. Furthermore, a Delta of 0 signifies annihilation and is Non-reality.

2. Regarding the existence of objects (particles) being the premise of force [Isaac Newton "Classical Mechanics and Particle Physics"]

- If 'the existence of objects (particles) is the premise of force', how do 'objects (particles)' come into existence? Do 'objects (particles)' not belong to the Universe? If so, do 'objects (particles)' not at least presuppose the Universe as a premise? Then, since the Universe is Nothingness + Shift ($\rightarrow$) and it was stated that Shift ($\rightarrow$) $\equiv$ Force (F) $\equiv$ Pressure (P) $\equiv$ Delta (δ) $\equiv$ [Volume (V) * Density (ρ)], '*force precedes objects*' rather than '*the existence of objects (particles) being the premise of force*'.

- Additionally, regarding 'gravity', Motion depends on the resistance gradient ($-\nabla R$) (Motion $\propto -\nabla R$). And regarding Earth, since its Inward Surface Area is structurally and naturally larger than its Outward Area ($SA_{inward} > A_{outward}$), *the phenomenon of moving toward Earth according to the actuality of the difference between Inward Pressure and Outward Pressure is what is called gravity.*

3. Regarding eternal linear motion in space without external forces [Galileo Galilei, Isaac Newton "First Law of Motion"]

- First, since it was stated that Shift [Force (F)] forms Space, the existence of Space means that Force fills that Space. Therefore, in the same sense as Absolute Nothingness, *Absolute Empty-space does not exist (Non-reality).*
- Furthermore, Space cannot be formed merely by Force filling it; Force must form a Density above a certain threshold without dispersing. And that Force is not a static something, but Pressure undergoing Perpetual Shift. Thus, Density according to Pressure proves that all Reality in the Universe is osmotically interfused, and *Space completely isolated from the Universe is Non-reality.*
- And *Motion perpetuates in the path of lowest Resistance (R).*
 - Motion $\propto -\nabla R \Leftrightarrow -\nabla \rho$ [Equivalent to resistance gradient and density gradient]

[Equivalent to resistance gradient and density gradient]: As Pressure increases, Density also increases, and as Pressure decreases, Density also decreases; thus, the Resistance gradient ($-\nabla R$) becomes synonymous with the Density drop/gradient ($-\nabla \rho$).

4. Regarding the intrinsic invariant properties of matter defined by the relation between acceleration and force ($F=ma$) [Isaac Newton "Principia"]

- Previously, it was stated that *"force precedes objects' rather than 'the existence of objects (particles) being the premise of force'."* If so, $F = ma$ must become $ma = F$, and since Acceleration (a) belongs to Shift (Force), $ma = F$ becomes $mF = F$. Thus—since 'force precedes objects'— $mF = F$ must become $m = F$ [Regarding $m=F$]. Therefore, *mass is not an 'intrinsic invariant property', but variable according to Motion $\propto -\nabla R \Leftrightarrow -\nabla \rho$ and $v \equiv I$*
 $\propto |-\nabla R| \Leftrightarrow |-\nabla \rho|$.

[Regarding $m=F$]: If Shift ($\rightarrow$) $\equiv$ Force (F) $\equiv$ Pressure (P) $\equiv$ Delta (δ) $\equiv$ [Volume (V) * Density (ρ)], then $m = F$ is $F \equiv (V * \rho) \equiv m$.

5. Regarding immediate and absolute symmetry of action and reaction [Isaac Newton "Third Law of Motion"]

- Action and Reaction, as long as an Object possesses Volume, structurally and naturally have its Inward Surface Area larger than its Outward Area. Accordingly, the Inward Pressure and Outward Pressure of the Object cannot form an 'Absolute Symmetry'.
- If Action and Reaction formed an 'Absolute Symmetry', they would be bound to a cycle (?) of 'Absolute Symmetry' and unable to perform any other Motion. For example, when trying to raise an arm, if a force forming an 'Absolute Symmetry' with the force attempting to raise the arm reacts simultaneously, one would be unable to raise the arm or move it otherwise.

By extension, everything else would likewise have to remain stopped, and extending this further, everything must have been stopped since the primordial (?) origin, and the present Universe could not exist in Reality. But since it is not so, 'immediate and absolute symmetry of action and reaction' is naturally rejected.

6. Regarding the antecedence of data that is simultaneous with phenomena and capable of predicting the future [Pierre-Simon Laplace "Laplace's Demon / Classical Determinism"]

- How are 'Information or Data' perceived by a stone? Or in what state does a stone possess 'Information or Data'? And 'Information or Data' can change from a Human perspective due to shifts in viewpoints, definitions (including updates), and the development of observational tools over time, and is not consistent depending on the observer (observer, observee, subjects imparting or receiving Effect, etc.), so 'Information or Data' is not a Constant.
- Taking a specific event as an example: ① Since the Universe constantly exhibits different States (as the total sum of the Universe perpetually increases), events exhibit a different State (value) [a new State (value)] every time (every moment is a unique first Shift heading toward Dynamic Boundlessness). ② Since Maintenance also has a Delta, events do not stop even at the moment one attempts prediction and continue to Shift; Observation also has a Delta (Observational Delta), and converting into Data also has a Delta. And ③ to the extent that the act of Observation imparts an Effect on the observee, an altered image is obtained. Therefore, ④ by Effect of observational act + Observational Delta + Data-conversion Delta, one strays from the Actuality of the object of observation, and 'simultaneous with phenomena' is rejected. And ⑤ since even among Humans, vision cannot be absolutely aligned, the future cannot be predicted under 'absolutely identical conditions'. Because the future cannot be predicted under 'absolutely identical conditions', it will inevitably deviate by whatever margin. Therefore, ⑥ *even if the future were determined—though one may attempt prediction—an image that absolutely matches the future cannot be derived.*

7. Regarding an already completed geometric field in which events occur [Albert Einstein "General Relativity"]

- ① Why is only the background (Field) completed while the characters (internal components) are not completed? ② How was that background (Field) completed? ③ From where to where or what constitutes the background (Field), and from where to where or what constitutes the characters? ④ In an Absolute sense, Completion implies a state where everything has already been accomplished and no further events can occur (requiring no addition or subtraction), which includes stasis; how then can it interact with characters or undergo deformation? Thus, ⑤ if the background (Field) were completed in an Absolute sense, it must either be completely isolated from the characters, or since the characters are included in the background (Field), the characters must also be completed in an Absolute sense and remain stopped. Thus, ⑥ *the Universe and the things belonging to the Universe are not completely isolated (and cannot be isolated), and the Universe and the things belonging to the Universe cannot be completed in an Absolute sense (since Shift*

perpetuates); therefore, 'an already completed geometric field in which events occur' is rejected.

**8. Regarding the absolute constant (c) unchanging anywhere in the universe
[Albert Einstein "Special Relativity"]**

- In a completed Field in an Absolute sense, Velocity (Shift) is Impossible.
- Furthermore, just as the Velocity (v) of a sailboat differs in headwinds versus tailwinds, or when walking through a mudflat versus walking on a flat, dry road, one does not say that time slowed down or sped up. Light also changes its Velocity (v) relative to gravitational fields or the atmosphere. This too should not be interpreted as time slowing down or speeding up; *it means that the Velocity of Light (c) is not an Absolute Constant.*
- $c \equiv v \equiv I \propto |-\nabla R| \Leftrightarrow |-\nabla \rho|$
- Unless one has observed or is observing the entire Universe, and unless the development of measurement technology is finalized, stipulating an Absolute Constant at that point is in itself contradictory.

Part 3

On Formation

※ Regarding formulas and examples in Part 3, it is taken for granted that deviations due to at least Effect of observational act + Observational Delta (δ_{obs}) + Data-conversion Delta straying from the Actuality of the object of observation, and Inward-Outward Asymmetry ($SA_{\text{inward}} > A_{\text{outward}}$) (Inward-Outward Asymmetry is described immediately below) naturally occur (such matters are beyond capacity and thus excluded from formulas and examples in Part 3); nevertheless, if it becomes necessary to derive specific values at specific positions for a specific Phenomenon or State, these methods shall be used, and this does not imply that such methods, formulas, or examples project the Actuality of the Universe absolutely simultaneously or absolutely identically.

On Formation Axioms

- **Formon($\mathbb{F}$) $\supseteq$ Shift($\rightarrow$) $\equiv$ Pressure(P) $\equiv$ Delta(δ) $\equiv$ [Volume(V) * Density(ρ)] $\equiv$ Mass(m)**
- **Non-reality of Absolute Stasis**
 - Shift($\rightarrow$) $\supset$ Maintenance, [($dt = 0$) = $\mathbb{A}$] $\Rightarrow$ [$\exists = (dt > 0)$]
 - Absolute Stasis implies the absence of Maintenance, which signifies annihilation; thus, it cannot exist in Reality [($dt = 0$) = $\mathbb{A}$]. Therefore, the Delta of all Reality in the Universe is greater than 0, and Absolute Stasis is Non-reality [{($dt = 0$) = $\mathbb{A}$ } $\Rightarrow$ { $\exists = (dt > 0)$ }].
- **Non-reality of Absolute Nothingness**
 - Delta(δ) $\supset$ dt, [($dt = 0$) = $\mathbb{A}$] $\Rightarrow$ [$\exists = (dt > 0)$] $\Rightarrow$ [$dt \equiv \{\delta * \delta_{\text{length}}(1 / \text{Density}(\rho))\}$] $\Rightarrow$ [$\delta, \delta_{\text{length}}, \text{Density}(\rho)\{\text{Pressure}(P) / \text{Volume}(V)\} > 0$] $\Rightarrow$ [$\delta, \delta_{\text{length}}, \text{Density}(\rho), \text{Pressure}(P), \text{Volume}(V) > 0$]
 - If dt is not 0, the Delta containing dt also cannot be 0. Since Pressure(P) $\equiv$ Delta(δ) $\equiv$ [Volume(V) * Density(ρ)], Pressure, Volume, and Density cannot be 0 either. Accordingly, following the Non-reality of Absolute Stasis, Absolute Nothingness is also Non-reality.
- **Non-reality of Fixed Infinity**
 - $0 \wedge \infty = \mathbb{A}$, $0 \wedge \infty = (dt = 0) = \mathbb{A}$
 - For Fixed Infinity to exist in Reality, infinite Pressure (P_{∞}) of infinite Density (ρ_{∞}) must occur with zero time differential ($dt = 0$)(stasis). However, $dt = 0$ signifies stasis while 'infinite Pressure (P_{∞}) of infinite Density (ρ_{∞})' signifies 'infinite action (non-stasis)', making it self-contradictory and Non-reality. Furthermore, the concept of 'Fixed Infinity' itself simultaneously asserts temporal stasis due to the Uncompletability of infinity and non-stasis of infinite action, which is self-contradictory and Non-reality.
- **Non-reality of Absolute State Overlap**

- $P_{total}(t + dt) > P_{total}(t)$ (where $dt > 0$, $\delta_{min} > 0$)
- Since Absolute Stasis is Non-reality, Delta cannot be erased [$\{(dt = 0) = \emptyset\} \Rightarrow \{\exists = (dt > 0)\}$] and persists in Perpetuity. Consequently, the Pressure (Retention Pressure) of the entire Universe increases in Perpetuity. Therefore, the total state value of the entire Universe can never be Absolutely identical to any past moment, and every occurring Phenomenon is the First Shift advancing toward Dynamic Boundlessness.
- **Inward-Outward Asymmetry ($SA_{inward} > A_{outward}$)**
 - $\Delta A(\text{Difference between Inward Surface Area and Outward Area}) \equiv SA_{inward}(\text{Inward Surface Area})[4 * \pi * \{r_{out}(\text{Radius of Inward Surface Area})\}^2] - A_{outward}(\text{Outward Area})[4 * \pi * \{r_{in}(\text{Radius of Outward Area})\}^2]$
 - Since the Volume (V) of all Reality in the Universe is greater than $\emptyset$, the structural difference between the radii of the Inward Surface Area and Outward Area of all Reality is naturally greater than $\emptyset$, and the Inward Surface Area is greater than the Outward Area (Inward Surface Area > Outward Area). Thus, all Reality in the Universe is structurally subject to Inward-Outward Asymmetry (Inward Surface Area > Outward Area), and nothing derived therefrom can achieve Absolute Symmetry.

1. Regarding the Accumulation of Maintenance ^[Maintenance]

- The Universe is a Phenomenon wherein Shift ($\rightarrow$) ^[Shift] has accumulated according to the Actuality of Perpetuity of Shift.
- Absolute Stasis is Non-reality, and naturally so is the Universe. That which is maintained ($t_0 \rightarrow t_1$) (hereinafter, that corresponding to $t_0 \rightarrow t_1$ is called 1 Unit) is also Shift ($\rightarrow$) [Pressure (P)] ^[Why Phase Shift occurs], and through continued Shift (Maintenance), Space (Volume) also continuously undergoes Expansion.

[Maintenance]: [Definition] In this paper, 'Maintenance' does not mean an active Act. It refers to a State that continues with a Minimum Delta (δ_{min}) ^[Original Pressure] bound to Reality ^[Pressure] that can never be eliminated (cannot become $\emptyset$). And that Delta is referred to in this paper as the 'Maintenance Delta'.

[Pressure]: [Definition] 'Pressure (P)' as referred to in this paper means 'a single or plural 1 Unit Force (F) possessing Directionality'. And the higher the Density (ρ), the shorter its Unit Length of Delta (δ_{length}).

[Original Pressure]: [Definition] Refers to the Pressure perpetually generated due to Directionality (Shift) coupled with the fact that the Universe is Non-fixed (Unfixable).

[Shift]: [Definition] If there were no 'Shift', nothing would occur and the present Universe could also not exist in Reality. And 'Shift ($\rightarrow$)' naturally possesses Directionality and is Pressure. Furthermore, even the Nothingness State undergoes 'Shift', and Shift is coupled with all Reality. And that 'Shift' is coupled with a Delta ($t_1 - t_0$), which is referred to in this paper as the 'Shift Delta'.

[Why Phase Shift occurs]: Same reason why Absolute Stasis is Non-reality: Absolute Stasis Non-reality $\equiv$ Shift $\equiv$ Original Pressure $\equiv$ Phase Shift (Displacement/Slippage) .

2. Regarding the Formation of the Universe

- ① As Volume increases (as Inward Surface Area increases), Original Pressure (Inward Pressure) also increases ^[Inward Pressure action of Original Pressure]. ② As Original Pressure increases, Retention Pressure also increases due to Inward-Outward Asymmetry ^[Inflow Pressure], thereby

increasing the internal Density of the Universe [\[Asynchronous Dual Action\]](#). ③ As the internal Density of the Universe increases, the Density of Original Pressure accumulating at the Boundary Dynamic Grid-lock [\[Boundary Dynamic Grid-lock of the Universe\]](#) also increases, causing the Volume of the Universe to undergo Expansion (increase in Inward Surface Area). ④ As the Volume of the Universe undergoes Expansion (increase in Inward Surface Area), Original Pressure also increases. ⑤ This cycle perpetuates.

- [(Total Retention Pressure of the Universe + Inflow Pressure at the outermost boundary of the Universe) / Average Density of the Universe (provided Average Density of the Universe > 1 Unit)] $\Leftrightarrow$ Volume of the Universe

[Inward Pressure action of Original Pressure]: Refers to Original Pressure acting inward towards the interior of the Universe (Inward Pressure) because, whichever direction Phase Shift occurs in Volume (Universe), there is no other Volume (Space) outside.

[Inflow Pressure]: *[Definition]* Refers to Pressure flowing into the interior of Dynamic Grid-lock [\[Dynamic Grid-lock\]](#). Conversely, Pressure flowing out is called *Outflow Pressure*. Inflow Pressure penetrates into the interior, becomes absorbed into internal Density, and becomes Retention Pressure.

[Dynamic Grid-lock]: *[Definition]* Refers to the boundary (Dynamic Boundary) in the $\wedge v \wedge v$ (Arch Inverse-Arch) Configuration that serves as an indicator when referring to specific parts as exterior and interior, or refers to such a Density Gradient.

[Asynchronous Dual Action]: *[Definition]* Refers to the 2 actions of 'Original Pressure': ① mostly acting on (accumulating at) the Inward Surface Area of the Universe (Immediate Boundary Action), and ② partly flowing perpetually into the interior of the Universe due to Inward-Outward Asymmetry, thereby increasing Retention Pressure (Delayed Retention Action).

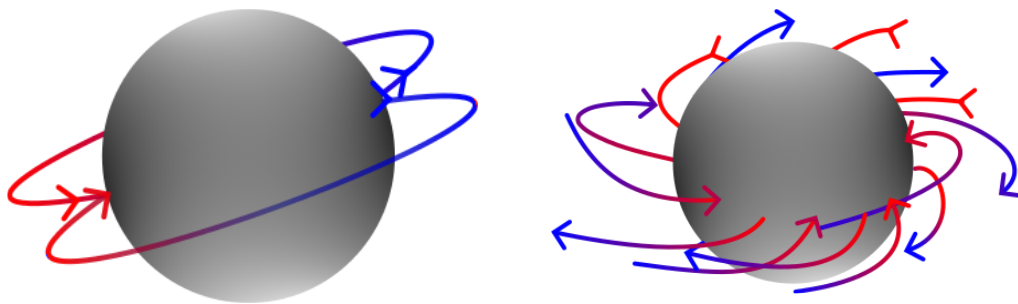

[Boundary Dynamic Grid-lock of the Universe]: Original Pressure persists in Perpetuity. Consequently, Pressure—excluding Inflow Pressure—achieves Dynamic Equilibrium [\[Dynamic Equilibrium\]](#) with the total Retention Pressure of the Universe at the outermost boundary, accumulating in Perpetuity (Density Increase), and every time this occurs, the Volume of the Universe expands.

[Dynamic Equilibrium]: *[Definition]* All Reality in the Universe forms a Dynamic Equilibrium [δ , δ_length , Density (ρ), Pressure (P), Volume (V) > 0]. At this time, its degree of Asymmetry serves as an indicator representing the presence or absence of Motion.

3. Regarding Motion [\[Motion in Part 3\]](#) and Objectification [\[Objectification\]](#)

- In "On Formation", Object and Motion are not distinguished. However, for convenience, based on the degree of Asymmetry in Dynamic Equilibrium or Quasi-fixed State [\[Quasi-fixed State\]](#), they are expressed as ① Motion and non-motion, and ② Exterior and interior (Object).
- Motion (Shift) of the Universe perpetuates.
 - The Volume of the Universe is squeezed according to Original Pressure (Immediate Boundary Action) exerted on the entire Universe due to the Shift of the entire Universe, and naturally all parts overlap above a certain threshold [Density (ρ) $\equiv$ Interfused]. This and Inflow Pressure resulting from Inward-Outward Asymmetry ($SA_inward > A_outward$) become Retention Pressure, and Direct Flow occurs due to the respective Directionality of Immediate Boundary Action and Retention Pressure.
 - In this process, Objects continue to be formed, and large Vortices are formed in various places; larger Vortices form larger or firmer Objects. And these Vortices collide (Impact) with Direct Flow, generating Eddies [\[Outflow Pressure\]](#).

- And perpetually: Object formation and Direct Flow formation due to Original Pressure; Object formation and Vortex formation due to Direct Flow; Object formation and Eddy formation due to Vortex; Object formation and smaller Eddy formation due to Eddy.
- Coupling of Vortex with Vortex, Eddy, or micro-Eddy (or splitting of Vortex into Eddy or micro-Eddy); coupling of Eddy with Eddy or micro-Eddy (or splitting of Eddy into micro-Eddy); coupling of micro-Eddy with micro-Eddy (or splitting of Eddy into smaller Objects).
- Feedback of Asynchronous Dual Action: Immediate Boundary Action (Original Pressure $\Leftrightarrow$ Boundary Dynamic Grid-lock) $\Leftrightarrow$ Delayed Retention Action (Boundary Dynamic Grid-lock $\Leftrightarrow$ Direct Flow $\Leftrightarrow$ Vortex $\Leftrightarrow$ Eddy $\Leftrightarrow$ micro-Eddy)
- Feedback of coupling and splitting: Original Pressure $\Leftrightarrow$ Boundary Dynamic Grid-lock $\Leftrightarrow$ Direct Flow $\Leftrightarrow$ Vortex + Vortex or Eddy or micro-Eddy $\Leftrightarrow$ Eddy + Eddy or micro-Eddy $\Leftrightarrow$ micro-Eddy + micro-Eddy
- $[\{ \text{Retention Pressure of Object} + (\text{Inflow Pressure of Object} - \text{Outflow Pressure of Object}) \} / \text{Average Density of Object (provided Average Density of Object} > 1 \text{ Unit)}] \Leftrightarrow \text{Volume of Object}$
- Splitting, Dispersion, and the like are also phenomena resulting from the Actuality that the total Pressure of the Universe perpetually increases. As the total Pressure of the Universe increases, limit Density (achievable Density) ^[Apexon] and the resulting Objectification are Variable. However, Fixed Infinity is Non-reality, and real Pressure in the Universe is finite; thus, limit Density and resulting Objectification cannot exceed the total Pressure (amount) real in the Universe.
- According to Inward-Outward Asymmetry, inflow is converged/compressed from a broader direction, and outflow is dispersed outward from a smaller volume. And as the resulting Density (Configuration) becomes fixed, the property to maintain Motion and the like in that specific Direction becomes stronger.
- Inertia $\equiv$ Inward Pressure(P_{Inward}) + Outward Pressure(P_{Outward})

$$m(t) \equiv \Sigma [P_{\text{inflow}}(t_{\delta}) - P_{\text{outflow}}(t_{\delta})] \equiv V * \rho$$

[Motion in Part 3]: That which was stated in 'Part 2' as 'Motion perpetuates in the path of lowest Resistance (R)' is restated in 'Part 3' as 'Motion continues in the path of lowest Density (ρ)' [v (Velocity and Motion) $\propto -\nabla\rho$], and this is again stated as 'Motion perpetuates through the convergence of Pressure (P) and dispersion of Density (ρ)' [v (Velocity and Motion) $\propto (+\nabla P \Leftrightarrow -\nabla\rho)$] ^[On the antecedence of Pressure convergence ($+\nabla P$)].

[On the antecedence of Pressure convergence (+VP)]: The reason Pressure convergence (+VP) (Original Pressure) precedes Density Gradient ($-\nabla\rho$) in the Motion formula is to eliminate non-real concepts such as 'Nothingness' or 'Infinite Density'. In Nothingness + Shift ($\rightarrow$), 'Nothingness' lacks reality, so naturally only real Shift ($\rightarrow$) accumulates, and through this accumulation [Pressure convergence (+VP)], Density (ρ) is formed.

[Objectification]: [Definition] The process of forming hierarchical Density higher than the baseline Density of Apexon [Volume (V) ≥ 1 Unit, ρ_{Apexon}] as total Pressure of the Universe increases.

[Quasi-fixed State]: [Definition] Regarding the degree of Asymmetry in Dynamic Equilibrium, refers to a State where the observer does not perceive Motion and it appears as if stopped.

[Outflow Pressure]: When Inflow Pressure becomes Objectified into Object B inside Object A according to the internal Density of Object A, becoming Retention Pressure, and that Retention Pressure flows out as Outflow Pressure, it proceeds at a Velocity according to the convergence of Outward Pressure and the Density Gradient ($+\nabla P \Leftrightarrow -\nabla\rho$) between interior and exterior. For example, if inside Object A, 20 Units of Pressure are compressed in 2 Units of Volume (Density 10), and the exterior of Object A is a hierarchy compressed with 4 Units of Pressure in 2 Units of Volume (Density 2), when the 20 Units of Pressure compressed inside Object A flow out to the exterior of Object A [outflow due to convergence of Outward Pressure (+VP)], Outflow Pressure: ① in the exterior layer of Object A with Density 2 [Pressure (P) 4 / Volume (V) 2], shifts 1 Unit of Volume during 1/5 Unit of Volume Shift Time ($-\nabla\rho$) [Another expression of 1/5 Volume Shift Time]; ② while shifting at the Velocity of ①, Outflow Pressure disperses in Pressure (Density) to the degree where Outward Pressure of Outflow Pressure and Inward Pressure relative to Outflow Pressure achieve balance, and then converges (+VP); ③ Pressure cannot flow out to a Density lower than Boundary Dynamic Grid-lock or Inward Pressure; ④ there can be no Outflow Pressure outside the Universe, and instead the Universe undergoes Expansion.

[Another expression of 1/5 Volume Shift Time]: Expressed in Delta Time to be described later, it becomes 'shifts 1 Unit of Volume during 0.2 Delta Time'; expressed in Velocity, it becomes 'shifts at 5 times the Velocity of 1 Unit Volume Shift Velocity in a hierarchy compressed with 2 Units of Pressure in 1 Unit of Volume [Density (ρ) 2]'.

[Apexon]: [Definition] The process of forming increasingly higher hierarchical Density as the total Pressure of the Universe increases.

4. Regarding Velocity and Time

※ In "4. Regarding Velocity and Time", as with other formulas, velocity and time are also derived by first distinguishing Objects, slicing a specific Phenomenon (interval) to calculate its value, and then inductively deriving values from it. ※ In the following formulas and examples, unless otherwise indicated, Reference Pressure (P_{ref}) means Volume (V) 2 * Density (ρ) 2 $\equiv$ Pressure (P) 4. And Reference Pressure (P_{ref}) $\equiv$ Reference Delta (δ_{ref}) $\equiv$ Reference Object (obj_{ref}).

- **4.1. Velocity (v) — Unit-Volume Shift Velocity (v_{vol}) and Delta Velocity (v_{δ})**
 - Unit-Volume Shift Velocity (v_{vol})
 - Unit-Volume Shift Velocity (v_{vol}) $\equiv$ Density (ρ) of Reference Pressure (P_{ref})
 - Delta Velocity (v_{δ})
 - Delta Velocity (v_{δ}) $\equiv$ Density (ρ) of Reference Pressure (P_{ref}) - Density (ρ) of Target Pressure (P)

- Delta Velocity (v_{δ}) is Variable according to Density (ρ) of Reference Pressure (P_{ref}) and Density (ρ) of Target Pressure (P).
- If Pressure is equal, higher Density has smaller Volume, and smaller Volume has higher Density; thus, if Pressure is equal, higher Density or smaller Volume is faster.
- Example 1: Regarding Delta Velocity (v_{δ}) for Pressure A-1 20 [Volume (V) 2 * Density (ρ) 10] and Pressure A-2 100 [Volume (V) 10 * Density (ρ) 10]:

Reference Pressure 1 (P_{ref} 1)	In a layer formed by Pressures A-1	In a layer formed by Pressures A-2	In a layer formed by Reference Pressures
Delta Velocity of Pressure A-1 is	0 v_{δ}	0 v_{δ}	8 v_{δ}
Delta Velocity of Pressure A-2 is	0 v_{δ}	0 v_{δ}	8 v_{δ}
Delta Velocity of Reference Pressure is	-8 v_{δ}	-8 v_{δ}	0 v_{δ}

- Example 2: Regarding Delta Velocity (v_{δ}) for Pressure B-1 20 [Volume (V) 2 * Density (ρ) 10] and Pressure B-2 396 [Volume (V) 12 * Density (ρ) 33]:

Reference Pressure 1 (P_{ref} 1)	In a layer formed by Pressures B-1	In a layer formed by Pressures B-2	In a layer formed by Reference Pressures
Delta Velocity of Pressure B-1 is	0 v_{δ}	-23 v_{δ}	8 v_{δ}
Delta Velocity of Pressure B-2 is	23 v_{δ}	0 v_{δ}	31 v_{δ}
Delta Velocity of Reference Pressure is	-8 v_{δ}	-31 v_{δ}	0 v_{δ}

- Example 3: Regarding Delta Velocity (v_{δ}) for Pressure C-1 90 [Volume (V) 2 * Density (ρ) 45] and Pressure C-2 396 [Volume (V) 12 * Density (ρ) 33]:

Reference Pressure 1 (P_{ref} 1)	In a layer formed by Pressures C-1	In a layer formed by Pressures C-2	In a layer formed by Reference Pressures
Delta Velocity of Pressure C-1 is	0 v_{δ}	12 v_{δ}	43 v_{δ}
Delta Velocity of Pressure C-2 is	-12 v_{δ}	0 v_{δ}	31 v_{δ}
Delta Velocity of Reference Pressure is	-43 v_{δ}	-31 v_{δ}	0 v_{δ}

- **Weight**

- Weight $\equiv$ Inward_Pressure_Vector_tool($P_{Inward_Vec_tool}$) + Outward_Pressure_Vector_tool($P_{Outward_Vec_tool}$)
- Weight is identical to Velocity, but is Pressure toward a specific Direction (the Direction toward the tool measuring weight).

- **4.2. Time — Unit-Volume Shift Time (t_{vol}) and Delta Time (t_{δ})**

- Unit-Volume Shift Time (t_{vol})
 - Unit-Volume Shift Time $\equiv$ Reference Pressure (P_{ref}) $\equiv 1 t_{vol}$
- Delta Time (t_{δ})
 - [Delta Time (t_{δ}) $\equiv$ Total Action Pressure / Reference Pressure (P_{ref})]
 $\equiv$ Retention Time
 - Retention Time is Variable according to the amount of Action and Reference Pressure.
- Example 1: Regarding Retention Time for Pressure A-1 20 [Volume (V) 2 * Density (ρ) 10] and Pressure A-2 100 [Volume (V) 10 * Density (ρ) 10]:

Reference Pressure 1 (P_{ref} 1)	In a layer formed by Pressures A-1, when 3 Actions occur and flow out	In a layer formed by Pressures A-2, when 3 Actions occur and flow out	In a layer formed by Reference Pressures, when 3 Actions occur and flow out
Retention Time of Pressure A-1 is	$3 t_{\delta}$	$15 t_{\delta}$	$0.6 t_{\delta}$
Retention Time of Pressure A-2 is	$0.6 t_{\delta}$	$3 t_{\delta}$	$0.12 t_{\delta}$
Retention Time of Reference Pressure is	$15 t_{\delta}$	$75 t_{\delta}$	$3 t_{\delta}$

- Example 2: Regarding Retention Time for Pressure B-1 20 [Volume (V) 2 * Density (ρ) 10] and Pressure B-2 396 [Volume (V) 12 * Density (ρ) 33]:

Reference Pressure 1 (P_{ref} 1)	In a layer formed by Pressures B-1, when 3 Actions occur and flow out	In a layer formed by Pressures B-2, when 3 Actions occur and flow out	In a layer formed by Reference Pressures, when 3 Actions occur and flow out
Retention Time of Pressure B-1 is	$3 t_{\delta}$	$59.4 t_{\delta}$	$0.6 t_{\delta}$
Retention Time of Pressure B-2 is	$0.1515 t_{\delta}$	$3 t_{\delta}$	$0.0303 t_{\delta}$
Retention Time of Reference Pressure is	$15 t_{\delta}$	$297 t_{\delta}$	$3 t_{\delta}$

- Example 3: Regarding Retention Time for Pressure C-1 90 [Volume (V) 2 * Density (ρ) 45] and Pressure C-2 396 [Volume (V) 12 * Density (ρ) 33]:

Reference Pressure 1 (P_{ref} 1)	In a layer formed by Pressures C-1, when 3 Actions occur and flow out	In a layer formed by Pressures C-2, when 3 Actions occur and flow out	In a layer formed by Reference Pressures, when 3 Actions occur and flow out
Retention Time of Pressure C-1 is	$3 t_{\delta}$	$13.2 t_{\delta}$	$0.1333 t_{\delta}$
Retention Time of Pressure C-2 is	$0.6818 t_{\delta}$	$3 t_{\delta}$	$0.0303 t_{\delta}$
Retention Time of Reference Pressure is	$67.5 t_{\delta}$	$297 t_{\delta}$	$3 t_{\delta}$

- Regarding the preceding examples, Retention Pressure does not increase merely by the accumulation of Actions; for example, a screw tightened with Pressure 20 will not loosen by applying Pressure 10 twice [\[Principle of Threshold Pressure\]](#).
- The increase in Retention Pressure due to an increased number of Actions occurs because the asymmetry between Inflow Pressure and Outflow Pressure resulting from an increase in Retention Time [{+10 (Inflow Pressure) + -10 (Outflow Pressure) $\equiv$ 0 (Retention Pressure)} $\rightarrow$ {+10 (Inflow Pressure) + -8 (Outflow Pressure) $\equiv$ 2 (Retention Pressure)}] causes Outflow Pressure to become relatively smaller than Inflow Pressure, thereby increasing Volume or Density.

[Former]: [Definition] When describing a specific Object (Formon), refers to the system, hierarchy, etc., to which that Object belongs.

[Principle of Threshold Pressure]: Similarly, jumping 10 meters high twice cannot get one over a 20-meter wall.

5. Regarding Observation and Light

Velocity and Human Time spoken of by Humans are necessary but not Absolute; in the following examples, the fact that values are Variable according to Reference Pressure (P_ref) means that they are Variable according to the orientation, means, and methods of observation, measurement, etc.

- **5.1. Observed Velocity (v_obs)**
 - Observed Velocity (v_obs) $\equiv$ Density (ρ) of Reference Pressure 2 (P_ref 2) - [Density (ρ) of Reference Pressure 1 (P_ref 1) - Density (ρ) of Target]
 - Observed Velocity (v_obs) is Variable according to Density (ρ) of Reference Pressure 2 (P_ref 2), Density (ρ) of Reference Pressure 1 (P_ref 1), and Density (ρ) of Target.
 - Example 1: Regarding Observed Velocity (v_obs) for Pressure A-1 20 [Volume (V) 2 * Density (ρ) 10] and Pressure A-2 100 [Volume (V) 10 * Density (ρ) 10] :

Reference Pressure 2 (P_ref 2)	Reference Pressure 1 (P_ref 1)	In a layer formed by Pressures A-1	In a layer formed by Pressures A-2	In a layer formed by Reference Pressures
Pressure A-1	Observed Velocity of Pressure A-1 is	10 v_obs	10 v_obs	2 v_obs
	Observed Velocity of Pressure A-2 is	10 v_obs	10 v_obs	2 v_obs
	Observed Velocity of Reference Pressure is	18 v_obs	18 v_obs	10 v_obs
Pressure A-2	Observed Velocity of Pressure A-1 is	10 v_obs	10 v_obs	2 v_obs
	Observed Velocity of Pressure A-2 is	10 v_obs	10 v_obs	2 v_obs
	Observed Velocity of Reference Pressure is	18 v_obs	18 v_obs	10 v_obs
Reference Pressure	Observed Velocity of Pressure A-1 is	2 v_obs	2 v_obs	-6 v_obs

Reference Pressure 2 (P_ref 2)	Reference Pressure 1 (P_ref 1)	In a layer formed by Pressures A-1	In a layer formed by Pressures A-2	In a layer formed by Reference Pressures
	Observed Velocity of Pressure A-2 is	2 v_obs	2 v_obs	-6 v_obs
	Observed Velocity of Reference Pressure is	10 v_obs	10 v_obs	2 v_obs

- Example 2: Regarding Observed Velocity (v_obs) for Pressure B-1 20 [Volume (V) 2 * Density (ρ) 10] and Pressure B-2 396 [Volume (V) 12 * Density (ρ) 33] :

Reference Pressure 2 (P_ref 2)	Reference Pressure 1 (P_ref 1)	In a layer formed by Pressures B-1	In a layer formed by Pressures B-2	In a layer formed by Reference Pressures
Pressure B-1	Observed Velocity of Pressure B-1 is	10 v_obs	33 v_obs	2 v_obs
	Observed Velocity of Pressure B-2 is	-13 v_obs	10 v_obs	-21 v_obs
	Observed Velocity of Reference Pressure is	18 v_obs	41 v_obs	10 v_obs
Pressure B-2	Observed Velocity of Pressure B-1 is	33 v_obs	56 v_obs	25 v_obs
	Observed Velocity of Pressure B-2 is	10 v_obs	33 v_obs	2 v_obs
	Observed Velocity of Reference Pressure is	41 v_obs	64 v_obs	33 v_obs
Reference Pressure	Observed Velocity of Pressure B-1 is	2 v_obs	25 v_obs	-6 v_obs
	Observed Velocity of Pressure B-2 is	-21 v_obs	2 v_obs	-29 v_obs
	Observed Velocity of Reference Pressure is	10 v_obs	33 v_obs	2 v_obs

- Example 3: Regarding Observed Velocity (v_obs) for Pressure C-1 90 [Volume (V) 2 * Density (ρ) 45] and Pressure C-2 396 [Volume (V) 12 * Density (ρ) 33] :

Reference Pressure 2 (P_ref 2)	Reference Pressure 1 (P_ref 1)	In a layer formed by Pressures C-1	In a layer formed by Pressures C-2	In a layer formed by Reference Pressures
Pressure C-1	Observed Velocity of Pressure C-1 is	45 v_obs	33 v_obs	2 v_obs
	Observed Velocity of Pressure C-2 is	57 v_obs	45 v_obs	14 v_obs
	Observed Velocity of Reference Pressure is	88 v_obs	76 v_obs	45 v_obs
Pressure C-2	Observed Velocity of Pressure C-1 is	33 v_obs	21 v_obs	-10 v_obs

Reference Pressure 2 (P_ref 2)	Reference Pressure 1 (P_ref 1)	In a layer formed by Pressures C-1	In a layer formed by Pressures C-2	In a layer formed by Reference Pressures
	Observed Velocity of Pressure C-2 is	45 v_obs	33 v_obs	2 v_obs
	Observed Velocity of Reference Pressure is	76 v_obs	64 v_obs	33 v_obs
Reference Pressure	Observed Velocity of Pressure C-1 is	2 v_obs	-10 v_obs	-41 v_obs
	Observed Velocity of Pressure C-2 is	14 v_obs	2 v_obs	-29 v_obs
	Observed Velocity of Reference Pressure is	45 v_obs	33 v_obs	2 v_obs

• **5.2. Observed Time (t_obs)**

- Observed Time (t_obs) $\equiv$ Delta Time (t_δ) / [Density (ρ) of Reference Pressure 1 (P_ref 1) / Density (ρ) of Reference Pressure 2 (P_ref 2)]
- Observed Time (t_obs) is Variable according to Delta Time (t_δ) and Density (ρ) of Reference Pressure 1 (P_ref 1) and Reference Pressure 2 (P_ref 2).
- Example 1: Regarding Observed Time for Pressure A-1 20 [Volume (V) 2 * Density (ρ) 10] and Pressure A-2 100 [Volume (V) 10 * Density (ρ) 10] :

Reference Pressure 2 (P_ref 2)	Reference Pressure 1 (P_ref 1)	In a layer formed by Pressures A-1, when 3 Actions occur and flow out	In a layer formed by Pressures A-2, when 3 Actions occur and flow out	In a layer formed by Reference Pressures, when 3 Actions occur and flow out
Based on Pressure A-1	Observed Time of Pressure A-1 is	3 t_obs	15 t_obs	0.6 t_obs
	Observed Time of Pressure A-2 is	0.6 t_obs	3 t_obs	0.12 t_obs
	Observed Time of Reference Pressure is	75 t_obs	375 t_obs	15 t_obs
Based on Pressure A-2	Observed Time of Pressure A-1 is	3 t_obs	15 t_obs	0.6 t_obs
	Observed Time of Pressure A-2 is	0.6 t_obs	3 t_obs	0.12 t_obs
	Observed Time of Reference Pressure is	75 t_obs	375 t_obs	15 t_obs
Based on Reference Pressure	Observed Time of Pressure A-1 is	0.6 t_obs	3 t_obs	0.12 t_obs

Reference Pressure 2 (P_ref 2)	Reference Pressure 1 (P_ref 1)	In a layer formed by Pressures A-1, when 3 Actions occur and flow out	In a layer formed by Pressures A-2, when 3 Actions occur and flow out	In a layer formed by Reference Pressures, when 3 Actions occur and flow out
	Observed Time of Pressure A-2 is	0.12 t_obs	0.6 t_obs	0.024 t_obs
	Observed Time of Reference Pressure is	15 t_obs	75 t_obs	3 t_obs

- Example 2: Regarding Observed Time for Pressure B-1 20 [Volume (V) 2 * Density (ρ) 10] and Pressure B-2 396 [Volume (V) 12 * Density (ρ) 33]:

Reference Pressure 2 (P_ref 2)	Reference Pressure 1 (P_ref 1)	In a layer formed by Pressures B-1, when 3 Actions occur and flow out	In a layer formed by Pressures B-2, when 3 Actions occur and flow out	In a layer formed by Reference Pressures, when 3 Actions occur and flow out
Based on Pressure A-1	Observed Time of Pressure B-1 is	3 t_obs	59.4 t_obs	0.6 t_obs
	Observed Time of Pressure B-2 is	0.0459 t_obs	0.9091 t_obs	0.0092 t_obs
	Observed Time of Reference Pressure is	75 t_obs	1,485 t_obs	15 t_obs
Based on Pressure A-2	Observed Time of Pressure B-1 is	9.9 t_obs	196.02 t_obs	1.98 t_obs
	Observed Time of Pressure B-2 is	0.1515 t_obs	3 t_obs	0.0303 t_obs
	Observed Time of Reference Pressure is	247.5 t_obs	4,900.5 t_obs	49.5 t_obs
Based on Reference Pressure	Observed Time of Pressure B-1 is	0.6 t_obs	11.88 t_obs	0.12 t_obs
	Observed Time of Pressure B-2 is	0.0092 t_obs	0.1818 t_obs	0.0018 t_obs
	Observed Time of Reference Pressure is	15 t_obs	297 t_obs	3 t_obs

- Example 3: Regarding Observed Time for Pressure C-1 90 [Volume (V) 2 * Density (ρ) 45] and Pressure C-2 396 [Volume (V) 12 * Density (ρ) 33]:

Reference Pressure 2 (P_ref 2)	Reference Pressure 1 (P_ref 1)	In a layer formed by Pressures C-1, when 3 Actions occur and flow out	In a layer formed by Pressures C-2, when 3 Actions occur and flow out	In a layer formed by Reference Pressures, when 3 Actions occur and flow out
Based on Pressure A-1	Observed Time of Pressure C-1 is	3 t_obs	13.2 t_obs	0.1333 t_obs
	Observed Time of Pressure C-2 is	0.9298 t_obs	4.0909 t_obs	0.0413 t_obs
	Observed Time of Reference Pressure is	1,518.75 t_obs	6,682.5 t_obs	67.5 t_obs
Based on Pressure A-2	Observed Time of Pressure C-1 is	2.2 t_obs	9.68 t_obs	0.0978 t_obs
	Observed Time of Pressure C-2 is	0.6818 t_obs	3 t_obs	0.0303 t_obs
	Observed Time of Reference Pressure is	1,113.75 t_obs	4,900.5 t_obs	49.5 t_obs
Based on Reference Pressure	Observed Time of Pressure C-1 is	0.1333 t_obs	0.5867 t_obs	0.0059 t_obs
	Observed Time of Pressure C-2 is	0.0413 t_obs	0.1818 t_obs	0.0018 t_obs
	Observed Time of Reference Pressure is	67.5 t_obs	297 t_obs	3 t_obs

- Observation involves a medium between the observer and the observed object. And that medium must act upon (collide with / Impact) both the observed object and the observer. Thus, due to the asymmetry of inflow and outflow caused by Inward-Outward Asymmetry ($SA_{inward} > A_{outward}$), complete (Absolute) original form cannot be maintained after action (Impact), and deformation naturally occurs to whatever extent.
- Regarding Zeno's Paradox "Achilles and the Tortoise": ① Based on Achilles, in every moment Achilles senses, Achilles is faster than the tortoise, so the tortoise is caught by Achilles. ② Based on the tortoise, in every moment the tortoise senses, Achilles is faster than the tortoise, so the tortoise is caught by Achilles. Thus, the paradox assumes there is a 3rd observer observing Achilles and the tortoise running, and that 3rd observer can divide moments to Fixed Infinity (can sense or observe moments to Fixed Infinity). However, ③ claiming that moments can be divided to Fixed Infinity asserts temporal stasis due to Uncompleatability of Fixed Infinity and non-stasis of infinite action simultaneously, which is contradictory and Non-reality. Therefore, ④ based on the 3rd observer, likewise in every moment the 3rd observer senses, Achilles is faster than the tortoise, so the tortoise is caught by Achilles.
- **5.3. Light**

- 'Light' is a phenomenon *[Phenomenon]* resulting from the Actuality according to Density—including blockage, passage, etc., unlike the preceding connection—presupposing and succeeding the connection that all Reality inside the Universe is osmotically interfused *[Inevitable Interfused]*.
- Light from the sun is a phenomenon—according to Actuality—where the Outflow Pressure of the sun undergoes Phase Shift at a Velocity according to Density differences, and Pressure (Density) disperses to the degree where Outward Pressure of that Outflow Pressure and Inward Pressure relative to that Outflow Pressure achieve balance. If so, what is called a photon refers not to an Object or the like, but to a Phenomenon (State), and thus light does not need to embody (mimic) the Outflow Pressure of the sun; as long as it is similar to that Phenomenon (State), a phenomenon (State) similar to light is embodied.
- ① If there is Pressure (Object) of higher Density in a Volume similar to or smaller than what is called a photon, its Velocity will be faster than that of what is called a photon. ② Brightness or intensity of Light depends on the Density of what is called a photon. If so, the Density of what is called a photon can change, and the ability of Density to change means that its Velocity is also variable. ③ Velocity depends on relative Density difference. Thus, even if the Density of what is called a photon does not change, if the relative Density difference changes, the Velocity of what is called a photon naturally changes. Therefore, for the Velocity (c) of what is called a photon to be invariant, the relative Density difference regarding photons must be invariant and the overall Density of the entire Universe must be absolutely identical and invariant. However, it is not so. ④ Furthermore, if its Velocity (c) were invariant regardless of relative Density differences, Light should not be able to be blocked. But since it is not so, the Velocity (c) of what is called a photon is not an Absolute Constant.
- Regarding expressions such as Human Time slowing down when the Velocity of Light (c) slows down: that is because the values of Human Time or distance, which usually serve as criteria for velocity, were manipulated in order to keep the Velocity (c) of what is called a photon constant. If Human Time or distance (Shift Volume) were applied to calculating the Velocity (c) of what is called a photon in the exact same way as calculating other velocities, the Velocity (c) of what is called a photon would be variable. Even if not, if a 3rd standard were used instead of calculating based on (fixing) the Velocity (c) of what is called a photon, the Velocity (c) of what is called a photon would likewise be variable. The Velocity of Light (c) is not a Natural Absolute Constant, but was constantized by declaration, and this can disrupt Human Time, distance, Velocity, etc.

[Inevitable Interfused]: All Reality belongs to the Universe (Space), and the fact that Density exists in Reality in the Universe proves the osmotic interfusal of all Reality in the Universe and the inevitability of that interfusal.

[Phenomenon]: [Definition] Refers to the image (Image) observed by an observer.

6. On Continuity

- For all Reality, the Delta is not $\emptyset$, and a Delta of $\emptyset$ does not exist in reality [since Absolute Stasis ($\emptyset$) does not exist in reality] [$(\delta = \emptyset) = \#$], so regardless of distinctions made by an observer, all Reality continues without even an instant of Absolute Stasis.
- Regarding "The Ship of Theseus", "When the wooden planks (parts) forming the ship are replaced one by one, and eventually all parts are replaced, is this ship the original Ship of Theseus, or a new ship?", if the structure is maintained (Maintenance), it could be called a ship. However, discerning whether it is a ship or not and discerning whether it is the Ship of Theseus or not are different matters. Simply discerning whether it is a ship or not would be variable depending on the person; but discerning whether it is the Ship of Theseus or not after discerning whether it is a ship or not would be even more variable.
- Aside from the impossibility of Absolute Stasis of Reality, the judgment of continuity by an observer is variable according to Observer Asynchrony.

Epilogue

A Fixing-holder or the like that fixes a given Object cannot exist in Reality within that Object. Just as a Fixing-holder fixing an arm to the outside cannot exist in Reality inside the arm, taking a Human as an example, the standard (Quasi-fixed State) for a Human exists in Reality outside the Human, such as the sun, society, or a group. Even if one makes all judgments by oneself, it is the same; this is inevitable because one cannot be completely isolated from the Effect of existing infrastructure ecologically, biologically, or through Experience.

It might seem that this paper denies the definition of Human or the Act of defining. However, the definition of Human or the Act of defining, just as 'the Non-fixed State is reduced to a Quasi-fixed State', acts as a standard (Quasi-fixed State) regarding Human sensation, communication, and the like. Therefore, it is essential for Humans, and I naturally do not deny the Act of defining (thinking) by Humans itself.

I do not deny the framework of Humans or the Act of Humans creating a framework itself. However, a previously formed framework must not act as an immobile wall that hinders 'another', 'better', or 'larger' framework from being formed or attempting to be formed in the future, and it is that action which I reject. Furthermore, such an action is a denial of its own process of formation by the previously formed framework itself, thereby denying its own Reality. Therefore, I hope this paper serves as an example of forming something different from existing frameworks against the contradictory Act of existing frameworks acting as immobile walls.

"Shift perpetuates regardless of any Reality and whether any Reality desires it or not." Thus, "All Phenomena and Reality are products of Shift, and Shift perpetuates." And, "The Universe is the perpetual feedback between the Non-fixed State and the Quasi-fixed State, a Fractal Perpetuity."
